

Metal Counter Support

Upgrade from welded tubular metal supports to one piece formed steel supports. Welded tubular metal supports typically fail at their weakest points, the welds. By using a one piece formed steel construction, these supports eliminate the weak welds, allowing them to support a load significantly greater than a typical welded tubular metal support. The powder coated finish is more consistent and durable than the painted finish found on most welded supports. When installed appropriately, this type of support also can aid in A.D.A. compliance applications.

- No Welds to Weaken Support Capabilities.
- Standard stocked size: 18" x 24" other sizes available.
- All Supports are reversible
- 1/8" Steel Construction
- Exceeds 1,000 lbs Load Limit
- 1 1/2" Forms with Multiple 1/4" Mounting Holes on each Side
- Typical Size has a 3" x 3" – 45 Degree Notch for wire runs and wall cleats
- Black and White standard colors, Gray, Almond, and Primed available.
- Durable Powder Coated Finish
